

Laravel

CSS integration

To beautify the appearance of the website, of course we have to use CSS. But we don't need to create css from the beginning. We can use CSS framework, such as **bootstrap**.

Let's go to [getbootstrap.com](https://getbootstrap.com/docs/5.0/getting-started/introduction/) and copy the CSS link..

(<https://getbootstrap.com/docs/5.0/getting-started/introduction/>)

CSS

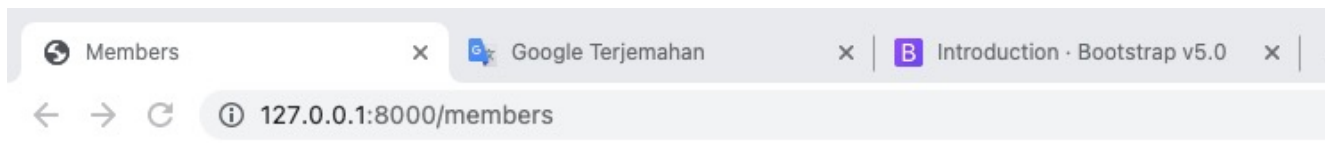

Copy-paste the stylesheet `<link>` into your `<head>` before all other stylesheets to load our CSS.

```
<link href="https://cdn.jsdelivr.net/npm/bootstrap@5.0.1/dist/css/bootstrap.min.css" rel="stylesheet">
```

Copy

Then paste it in the view layouts that we created earlier (app.blade.php)

```
resources > views > layouts > app.blade.php > html > body.container
1 <!DOCTYPE html>
2 <html lang="en">
3
4 <head>
5   <meta charset="UTF-8">
6   <meta http-equiv="X-UA-Compatible" content="IE=edge">
7   <meta name="viewport" content="width=device-width, initial-scale=1.0">
8   <title>Members</title>
9   <link href="https://cdn.jsdelivr.net/npm/bootstrap@5.0.1/dist/css/bootstrap.min.css"
10 </head>
11
12 <body class="container">
13   @yield('content')
14 </body>
15
16 </html>
```

We can add another bootstrap function in the index view like :

```
web.php Member.php members.blade.php x
resources > views > members > members.blade.php > div.card.mb-1
1 @extends('layouts.app')
2
3 @section('content')
4 <h1>This is a sozolab members page</h1>
5
6 @foreach ($informations as $information)
7 <div class="card mb-1">
8     <div class="card-body">
9         <p><strong>Name: {{ $information['name'] }}</strong></p>
10        <p>Hobby: {{ $information['hobby'] }}</p>
11    </div>
12 </div>
13 @endforeach
14
15 <div>
16     {{ $informations -> links() }}
17 </div>
18 @endsection
```

Thank you 😊
